

The Main Street Commerce Bundle: Reclaiming Digital Sovereignty

SKU:

SOV-BNDL-MAINST

Version 1.0

Deployment Brief

CONFIDENTIAL
ISLAND MODE ACTIVE

Local professionals are trapped in the Privacy Paradox.

The Gravity of AI Efficiency

Need for automated CRM, OCR, and rapid data processing to survive.

Main Street Businesses

The Gravity of Confidentiality

Legal and ethical inability to upload client data to cloud servers.

- Modern businesses require enterprise AI to remain competitive.
- Uploading protected client data to external cloud servers violates trust and compliance.
- The Result: Stagnation through risk-aversion or catastrophic data exposure.

Island mode automation breaks the reliance on external cloud infrastructure.

| | Monthly Cloud SaaS | Island Mode / The Main Street Bundle |
|----------------------|----------------------------------|---|
| Financial Model | Endless Monthly Fees | ✔ One-Time Perpetual License (\$449.00) |
| Data Location | Harvested in Big Tech Clouds | ✔ 100% Local / Air-Gapped |
| Outage Resilience | Paralyzed without ISP | ✔ Fully Operational via Local P2P Mesh |
| Privacy & Compliance | Constant Risk of External Breach | ✔ Cryptographic Local Security |

A localized AI assistant combined with an un-killable Wi-Fi mesh network.

Zero Cloud.
Zero Subscriptions.
Absolute Privacy.

Identity:

The Main Street Commerce Bundle

SKU:

SOV-BNDL-MAINST

Role:

Local AI Administrative Assistant
& Decentralized Comms Hub

Price:

\$449.00 (Software Entitlements +
Hardware)

The hybrid architecture fuses specialized hardware with sovereign software.

3. Cryptographic Licensing

SHA-256 License Key (unlocks the container) & X.509 Mesh Identity Certificate (establishes node trust).

2. Core Software

OpenClaw Office Image (Sovereign Executive), Whisper AI, Tesseract OCR, and Mesh Routing Daemon.

1. Physical Hardware

Nomad Mesh-Point Router (Ruggedized Wi-Fi 6E / LoRaWAN Access Point, Quad-core ARM, 4GB RAM, 2.5GbE PoE+) & 48V PoE Injector with shielded Cat6.

The Sovereign Executive acts as a localized digital employee inside your building.

All processing occurs natively within the local hardware canopy. Zero external API calls.

The Scribe instantly digitizes and structures local voice communications.

The Archivist translates unstructured paper into an organized PostgreSQL database.

The Gatekeeper negotiates private scheduling without exposing calendars to Big Tech.

Takeaway: Replaces external tools like Calendly. The business owner's schedule is never exposed to Google or Microsoft.

The Nomad Mesh-Point ensures continuous operation through local ISP outages.

Hybrid fulfillment bridges digital cryptographic provisioning with physical hardware delivery.

Installation requires minimal infrastructure and executes via a localized handshake.

System Requirements:

- **Host Machine:** Sovereign Sentry Pro, Nomad Link, or existing local server.
- **Compute:** Minimum 8GB RAM (16GB recommended for heavy OCR processing), fast NVMe storage.
- **Network:** One open Ethernet port.

Sovereign Sentry Pro

Nomad Mesh-Point

1. Hardware Hookup

Plug Nomad Mesh-Point into power and the host machine via Ethernet.

2. Software Deploy

Run the one-line curl installer via SSH to pull the Executive containers.

3. The Handshake

Mesh-Point detects the Executive, configures local DNS (executive.local), and broadcasts the secure Wi-Fi network.

Built-in threat mitigation anticipates and neutralizes operational risks.

| | | |
|---|---|---|
|  Threat: Mesh Interference Heavy concrete blocks Wi-Fi P2P signals. |  |  Shield: LoRaWAN Failover Node automatically downshifts to low-bandwidth radio for critical transmissions. |
|  Threat: Storage Saturation High-res OCR document processing fills the local NVMe drive. |  |  Shield: Auto-Compression The Archivist script invokes Ghostscript to dynamically compress PDFs after OCR. |
|  Threat: SaaS Creep User unknowingly attempts to link secure CRM to external cloud trackers. |  |  Shield: Egress Firewall Default Island Mode actively blocks outbound traffic to known data-brokers unless overridden. |

The Main Street Blueprint yields compounding structural and financial ROI.

Initiate deployment of the Main Street Commerce Bundle.

Target Asset: SOV-BNDL-MAINST
Status: Active / Hybrid Fulfillment Ready
Requirement: Whitelisted Docker Registry Access & Valid Host Architecture

Secure your local operations. **Deploy the Sovereign Executive to your network today.**
